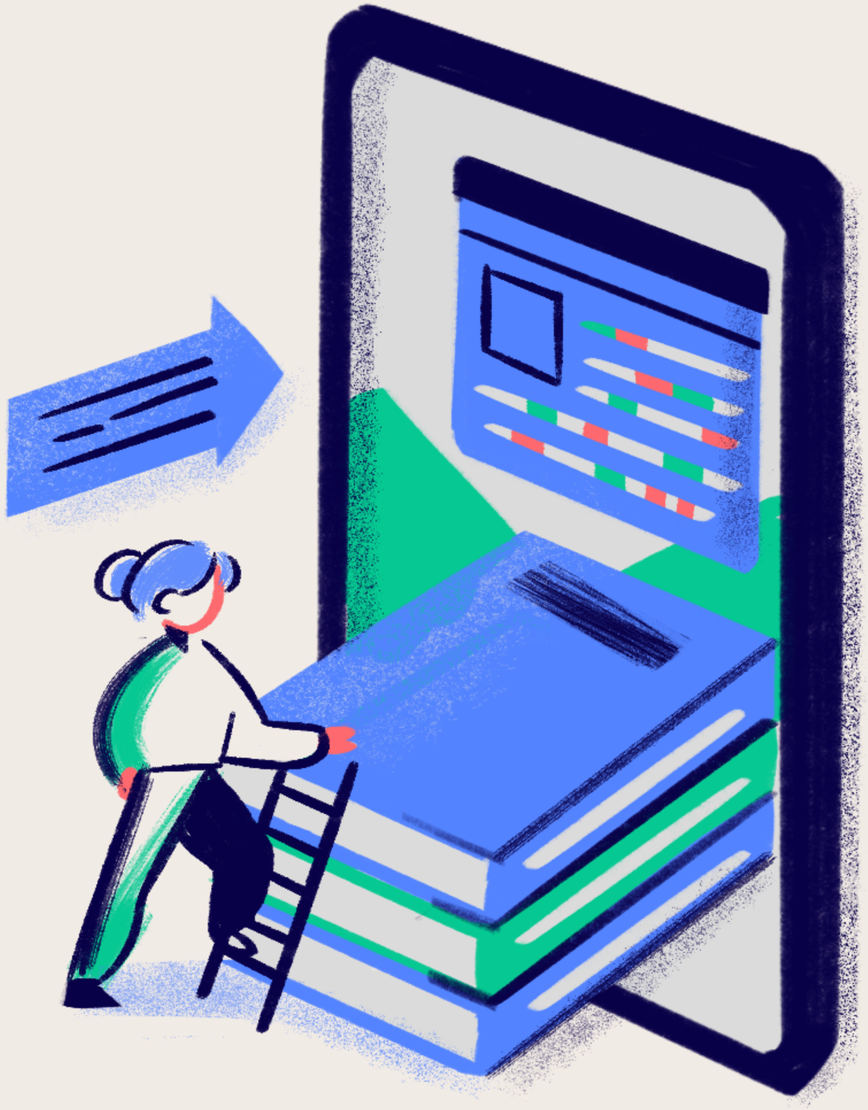
MyDailyWork
YOUR SUCCESS OUR MISSION

MACHINE LEARNING



WWW.MYDAILYWORK.COM

INSTRUCTIONS

- To get **Machine Learning internship Completion Certificate**, you must have to complete **at least 3 tasks within 1 month** for successful completion of the internship.

- Maintain a separate Git Hub repository(named **MYDAILYWORK** for all the tasks and share the link of the Git Hub repo in the task **submission form** (**Task Submission link will be given later through email**).

- You can refer to online resources such as Google Search and read tutorials. Watch videos(For Help).

SUBMISSION

- **A TASK SUBMISSION FORM will be shared later through email. Till then please continue your task.**
- **A video need to be created to showcase your work,**

- **For the Machine Learning internship, you will need to complete at least 3 tasks for successful completion of the internship.**

- The video can be hosted on LinkedIn for proof of your work and build credibility among your peers. You can tag **@mydailywork** in such posts..

- Please add **@mydailywork** in each of your task video postings on LinkedIn, Additionally, you can also add hashtags such as #mydailywork #Machine Learning. for more reach and visibility.

BENEFITS OF INTERNSHIP

INTERNSHIP CERTIFICATE

PLACEMENT SUPPORT

NETWORK OPPORTUNITY

PLEASE NOTE:

For the Data Science internship, you will need to complete **at least 3 tasks within 1 month** for successful completion of the internship.

TASK 1

MOVIE GENRE CLASSIFICATION

Create a machine learning model that can predict the genre of a movie based on its plot summary or other textual information. You can use techniques like TF-IDF or word embeddings with classifiers such as Naive Bayes, Logistic Regression, or Support Vector Machines.

DATASET CLICK HERE

Note:- Please Upload video demo of your application on linkedin and submit the url.

TASK 2

CREDIT CARD FRAUDDETECTION

Build a model to detect fraudulent credit card transactions. Use a dataset containing information about credit card transactions, and experiment with algorithms like Logistic Regression, Decision Trees, or Random Forests to classify transactions as fraudulent or legitimate.

DATASET CLICK HERE

Note:- Please Upload video demo of your application on linkedin and submit the url.

TASK 3

CUSTOMER CHURN PREDICTION

Develop a model to predict customer churn for a subscription-based service or business. Use historical customer data, including features like usage behavior and customer demographics, and try algorithms like Logistic Regression, Random Forests, or Gradient Boosting to predict churn.

DATASET CLICK HERE

Note:- Please Upload video demo of your application on linkedin and submit the url.

TASK 4

SPAM SMS DETECTION

Build an AI model that can classify SMS messages as spam or legitimate. Use techniques like TF-IDF or word embeddings with classifiers like Naive Bayes, Logistic Regression, or Support Vector Machines to identify spam messages

Note:- Please Upload video demo of your application on linkedin and submit the url.

TASK 5

HANDWRITTEN TEXT GENERATION

Implement a character-level recurrent neural network (RNN) to generate handwritten-like text. Train the model on a dataset of handwritten text examples, and let it generate new text based on the learned patterns.

ASK US FOR HELP!

- THE PURPOSE OF THIS INTERNSHIP IS TO LEARN AND GROW
- We have no desire to dictate to you. It is entirely up to you whether you seek guidance or not.
- The given tasks may seem very easy or very difficult. We expect you to approach the tasks with professional diligence and give them the attention they deserve.
